Overview

The "Actuarial Techniques for Non-Actuaries" training event is designed to equip professionals in the healthcare and health insurance industry with essential actuarial skills and knowledge. This program aims to bridge the gap between actuarial and non-actuarial employees, fostering a deeper understanding of key actuarial principles and their practical applications in cost analysis, pricing decisions, data management, and governance.

Who should attend?

- Corporate managers who interact with actuaries or actuarial reports
- Professionals in insurance, accounting, finance, and risk management, product development, pricing strategies
- HR professionals responsible for pension and employee benefits
- Non-Actuaries interested in gaining a foundational understanding of actuarial science

Benefits of attending

- Develop a deeper understanding of actuarial principles and how they can be applied to non-actuarial roles.
- Learn how to apply actuarial cost analysis techniques to their specific industry contexts.
- Understand how to develop and implement strategic pricing decisions based on high quality data.
- Learn how to use actuarial tools for analysing large datasets, identifying trends, and making informed decisions that enhance business performance.
- Gain techniques for measuring and managing quality and outcomes, sharing real-world examples of how these methods are applied in various industries.
