

Industrial Biotechnology for Non-Biological Training

+27 10 012 6034
info@jpec.co.za
www.jpec.co.za

This programme is designed for senior leaders, regulators, and policy professionals who are required to make informed decisions on biotechnology-driven initiatives without needing to become technical experts. It provides a structured understanding of the biological foundations that underpin industrial biotechnology—proteins, enzymes, and genetic technologies—while focusing on their implications for strategy, governance, regulation, risk management, and commercial viability.

Rather than teaching laboratory science, the programme equips participants to ask the right questions, interpret technical information presented by specialists, and evaluate biotechnology developments across the full value chain. Emphasis is placed on how scientific design choices influence scalability, regulatory compliance, safety, cost, and market adoption.

Dr Marushka Soobben
Biotech Founder
Trichome Biotechnologies

Dr Rosina Nkuna
Senior Lecturer
University of Johannesburg
