

AI for Nurse Leaders Summit

Protea Sea Point Hotel Cape Town
25 June

+27 10 012 6034
info@jpec.co.za
www.jpec.co.za

The summit is designed to provide nurse leaders and healthcare managers with a practical understanding of how artificial intelligence is transforming healthcare delivery. The programme will focus on introducing participants to the core concepts and terminology of AI, examining current applications of AI in clinical and healthcare management settings, and exploring how healthcare leaders can evaluate and responsibly implement AI technologies within their organisations.

The Summit will also address important issues such as the benefits and limitations of AI in healthcare, operational considerations for integrating AI into existing health information systems, and ethical questions related to algorithmic bias, patient privacy, and transparency in automated decision-making. A key objective is to equip participants with the ability to critically assess AI tools and identify opportunities where AI-driven initiatives could improve patient outcomes, efficiency, and quality of care.

Key Benefits of Attending

- Understand what works (and what fails) in AI adoption in healthcare, enabling you to make informed decisions in your organisation
- Build confidence in using AI tools in nursing practice, including ambient scribes and clinical decision support systems
- Gain hands-on experience with practical AI tools that can improve efficiency and patient care
- Identify high-impact opportunities for AI in your daily clinical environment to reduce workload and improve workflows
- Position yourself for emerging leadership roles in an AI-enabled healthcare system
